

Mark Brune, President
Industrial and Custom Coatings, LLC.
Linn, Missouri

"Typical of the industry leader, Crown Polymers went "green". . . when green was still a color. Today, Crown's environmentally friendly products help us win projects, both big and small. In addition, Crown's innovative product concepts have allowed us to beat others to the market with the most fashion-forward design options. Crown Polymer's cutting-edge product line keeps us ahead of competitors and provides customers with exactly what they want."

SHOCKING EXPERIENCE

STAY GROUNDED WITH CROWN OVERLAYS

Safety First. Durability... A Very Close Second.

When dependable ESD protection is needed, CrownPro™ SparkShield, static-dissipating floor system, is a classic standard and is now improved with a new primer... CrownLiquidCopper™ Primer.

Where the danger of static electricity exists, such as in manufacturing facilities, retail stores, institutions or in other environments where explosive volatile chemicals, mixtures of gas, vapor, spray or fine dust are present, Crown's system provides an extra level of protection.

Crown's line of LEED® 'Green' polymer & modified concrete floor overlays & wall systems, are free of VOC's and supports sustainability strategies. In addition, Crown products are virtually maintenance free and provide a decorative appearance while complying with ADA slip-resistant standards.

CrownCrete™ is a modified concrete floor overlay, ideal for wet processing conditions such as those found in food, meat & poultry processing, beverage bottling & pharmaceutical or industrial manufacturing environments. CrownCrete™ provides a safe, attractive and easy-to-clean environment.

Crown Polymers provides prompt and professional customer service and technical support from the industry's most qualified team of experts.

Learn how to sell and apply Crown products at the highly regarded 'Polymer Overlay College.™' Call today for more information about how to enroll.
