

Crown Clear™36

Product Description Sheet No. 325

High-Build Clear Epoxy Floor Coating for Commercial, Institutional, Industrial and Residential Use

Description

Crown Clear 36, Product No. 325 is a two-component modified clear epoxy floor topcoat. It is a 100% solids, non-shrink, nearly no odor during application of the clear polymer.

Application Methods

The mixed epoxy is applied as a neat clear protective coating, over stained concrete surfaces, tile, and polymer overlays.

Use

Used in decorative, commercial, institutional and industrial applications where the existing overlay needs added protection from wear, or water/chemical proofing. It can also provide a smooth or aggressive textured profile surface for anti-slip environments. Also used as a clear coating over clean concrete surfaces.

Benefits

It creates a clear dense beautiful seamless coating and wear surface over other products. It is easy to maintain. It requires no waxing. It improves the protected overlay increasing their durability and life cycle. It cures down to 36°F (2°C).

Advantages

- Complies with USDA, FDA, OSHA, ADA and LEED® “Green” requirements
- Great working time
- Nearly no odor during application
- No VOC’s – 100% solids formula
- Moisture-insensitive formula
- Excellent strength properties
- Excellent impact resistant

Typical Coverage

Neat Top Coat: 10 Mil (160 ft² / Gal.)

Refer to typical application coverage chart or project specification.

Typical Data for Crown Clear 36

Material and curing conditions at 73°F (23°C), 50% R.H unless noted.

COLOR Clear **VISCOSITY** 500 – 750 cps.
MIX RATIO BY VOLUME Comp “A” 2 to Comp “B” 1
POTLIFE 5-35 minutes **CONSISTENCY** Nearly Self-Leveling
TACK-FREE TIME

Substrate Temperature	50°F	73°F	90°F
	10–12 hrs	6–8 hrs	5–7 hrs

TENSILE PROPERTIES (ASTM D638) 7 days

Tensile Strength	8,800 psi
Elongation at Break	5 %

FLEXURAL PROPERTIES (ASTM D790) 7 days

Flexural Strength	16,000 psi
Tangent Modulus of Elasticity	510,000 psi

SLANT SHEAR STRENGTH (ASTM C882) 7 days

Test Temperature	Value	Mode of Failure
50°F	4,000 psi	100% Concrete Failure
90°F	4,200 psi	100% Concrete Failure

COMPRESSIVE STRENGTH (ASTM D695) Neat Epoxy

	50°F	73°F	90°F
8 hour	3,700 psi	6,300 psi	10,300 psi
1 day	10,100 psi	10,200 psi	10,300 psi
7 days	14,100 psi	14,200 psi	14,200 psi

COMPRESSIVE STRENGTH (ASTM C579) 7 days

EPC 11,500 psi

HARDNESS (INDENTATION - ASTM D2240)

Neat Epoxy, 7 day cure, Durometer, Shore D 80

INDENTATION (LOAD - MIL-D-3134, Para. 4.7.4.2.1)

EPC, 7 day cure, Method: 1 in. diameter steel ram steadily applies a load of 2,000 lbs. for 30 min. on the test specimen that is placed on concrete. Value - 0.004 in. indentation

INDENTATION (IMPACT - MIL-D-3134, Para. 4.7.3)

EPC, 7 day cure, Method: 2 lb. steel ball is dropped twice from a 8 ft. height. Value - 0.012 in. indentation

ADHESION TO CONCRETE (TENSILE PULL - ACI 503 R)

EPC, 7 day cure, - 410 psi, 100% concrete failure

ABRASION RESISTANCE (TABER - ASTM D 4060) EPC,

7 day cure, 1,000 cycles, 1,000 g. load, Wheel No. 17, Loss 0.051 g

WATER ABSORPTION (ASTM D 570)

EPC, 7 day cure, max. 0.15%

COEFFICIENT OF THERMAL EXPANSION (ASTM D696)

Temperature Range -30°C (-22°F) / 30°C (86°F)

7 days 18.0 X 10⁻⁶ in / in./°F

FLAMMABILITY (ASTM D635)

EPC, 7 day cure, self-extinguishing

SHELF LIFE 1.5 years in original unopened containers

PACKAGING 3, 5, 15, 150 - Gal/Units

How to Apply Crown Clear™ 36

Surface Preparation

Concrete and other substrates must be clean, sound, and free of dust, grease, waxes, coatings, curing compounds and all contaminants. Typical removal methods include dust-free abrasive shot blasting. Clean the substrate to the desired surface profile for the overlay system selected. Follow the Crown Polymer Surface Preparation Guide for best results.

Test Substrate For Cleanliness and Adhesion

Before placement of the polymer overlay, test the cleaned concrete substrate for soundness and cleanliness with a Tensile Pull Test ACI 503 R (min.200 psi) or Crown Polymers Surface Shear Test. 100% concrete must fail to pass either test without bond line failure.

Preconditioning Polymer

When temperatures drop, polymers typically thicken and it becomes harder to flow or to spread the product. When the temperatures are warmer, they typically become thinner. To improve product flow-ability maintain product temperature before mixing at about 20°C (73°F). When the substrate temperature is 5°C (40°F) or lower, preheat each epoxy component to 32°C (90°F) before mixing. Caution the pot life will be reduced by about 50%. It may be necessary to reduce the mixed volume quantity of the batch.

Customer Satisfaction

Apply the entire overlay system to a test area to ensure that the application meets the customer's expectations or provide a sample for written approval before starting work.

Mixing

Pour Component "B" into "A" and mix for approximately 90 seconds (until one even colors develops) with a low speed paddle attached to a drill (400-600 rpm). The mixed product is ready for immediate placement.

Coverage

Product coverage is depended upon the existing substrate surface profile and thickness of the designed system. Refer to Crown Polymers Application Method Guide and Specifications.

Application Methods

Refer to Crown Polymers Application Method Guide and Specifications.

Limitations

- Substrate temperature must be 3°C or 5°F above measured dew point temperature.
- Minimum application substrate temperature is 2°C (36°F).
- **DO NOT APPLY on WET or MOIST (DAMP) SUBSTRATE discoloration could occur.**
- **DO NOT THIN** - solvents could prevent proper cure.
- **WILL AMBER WHEN EXPOSED TO UV ENVIRONMENTS.**
- Apply coating at an even thickness, uneven application could cause discoloration.
- Apply the next polymer lift within 24 hours if the ambient temperature is below 85°F and 18 hours if above 85°F.
- Withstands vapor pressure up to 3 lbs/1,000 ft². Request data.

Maintenance

For maximum life expectancy, routinely sweep and wash floors with appropriate cleaners and detergents. All chemicals or abrasive grit should be removed as soon as possible.

Caution

Component "A" - Irritant

Contains epoxy resins. Prolonged contact with skin may cause irritation. Avoid contact with eyes.

Component "B" - Corrosive

Contact with skin may cause severe burns. Avoid eye contact. The product is a strong sensitizer. Contains modified cycloaliphatic amines.

Important Information

Use safety goggles and chemical-resistant gloves. NIOSH/OSHA approved respirator, and adequate ventilation is recommended when in a confined air space.

Clean Up

In case of spills wear suitable protective equipment, contain spill, and collect with absorbent material, place in suitable container. Ventilate area. Avoid contact. Dispose according to applicable local, state, and federal regulations.

First Aid

In case of skin contact, wash thoroughly with soap and water. For eye contact, flush immediately with plenty of water for at least 15 minutes. For respiratory problems, remove person to fresh air. Contact Physician Immediately. Wash clothing before re-use.

Consult Material Safety Data Sheet for More Information before use.
